

Meanwhile ■

Fill the empty. *Fuel the growing.*

A design-showcase concept — the marketplace for the in-between.

Owners monetize vacant commercial space at reduced rates;
growing businesses get premium locations at a fraction of the rent.

TEMPORARY COMMERCIAL OCCUPANCY · INDIA

Leasing offered two answers. We added *a third*.

A unit is either occupied or vacant — earning full rent, or nothing at all. Meanwhile introduces the in-between: temporary occupancy that pays the owner from day one and keeps every option open.

FOR THE OWNER

Earn during the vacancy

List a vacant unit at a reduced "meanwhile" rate and earn income while you keep hunting for the full-rent tenant — with total flexibility and a clear notice period written into the contract.

FOR THE BUSINESS

A premium address, half the rent

Move into a high-footfall location you couldn't otherwise afford. Test the market on a short commitment — then vacate on notice, or convert to the full lease when you're ready.

A vacant unit earns nothing — and still costs.

Owners hold out for the perfect long-term tenant while the meter runs. Growing businesses can't clear the upfront wall. So the space stays empty, and both sides lose.

50%

the meanwhile rate — half rent, occupied today

We leaned into the subject: empty space.

PALETTE

RECURRING MOTIF

Meanwhile ■

Drawn floor-plans instead of stock photography, a blueprint grid under everything, and mono spec-labels — with one signal accent: the warm glow of lights coming on in a building that was dark. Ink "acts" punctuate a concrete-paper page.

Living floor-plan hero

Vacancy odometer

Third-option switch

Horizontal how-it-works

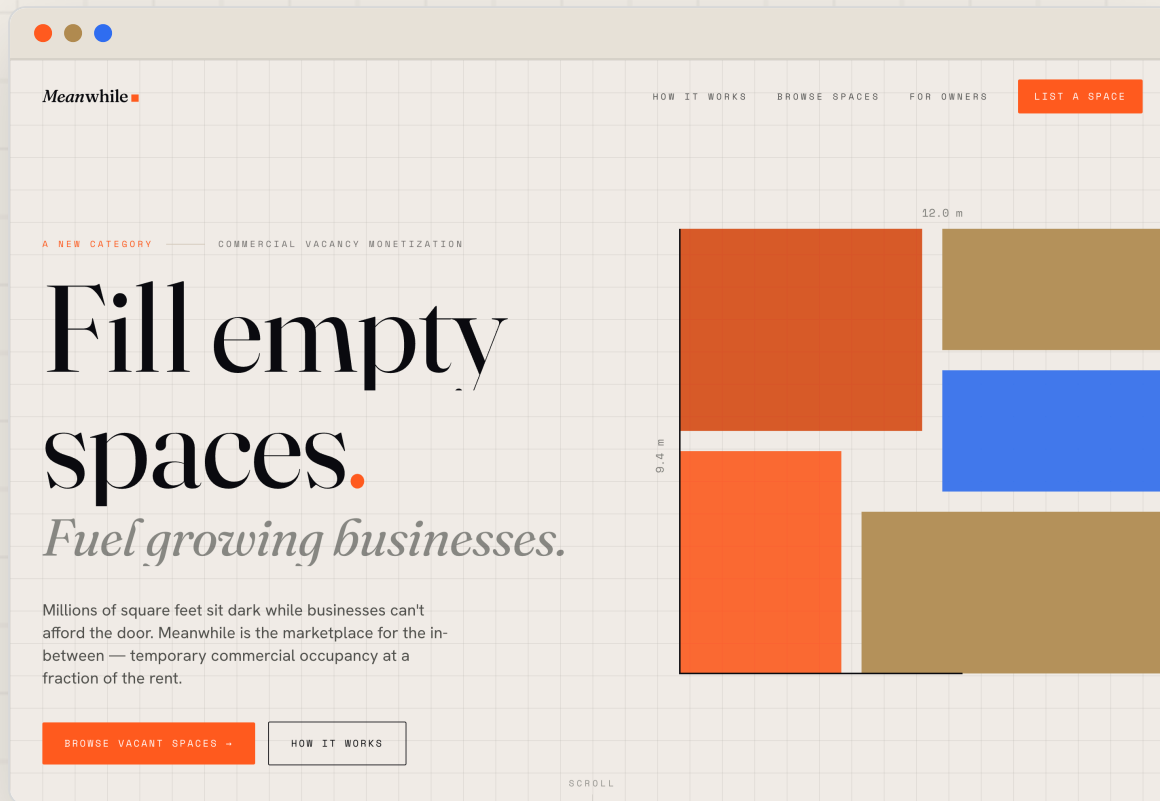

Rent splitter

Title-block footer

made. cursor

Nav contrast-flip

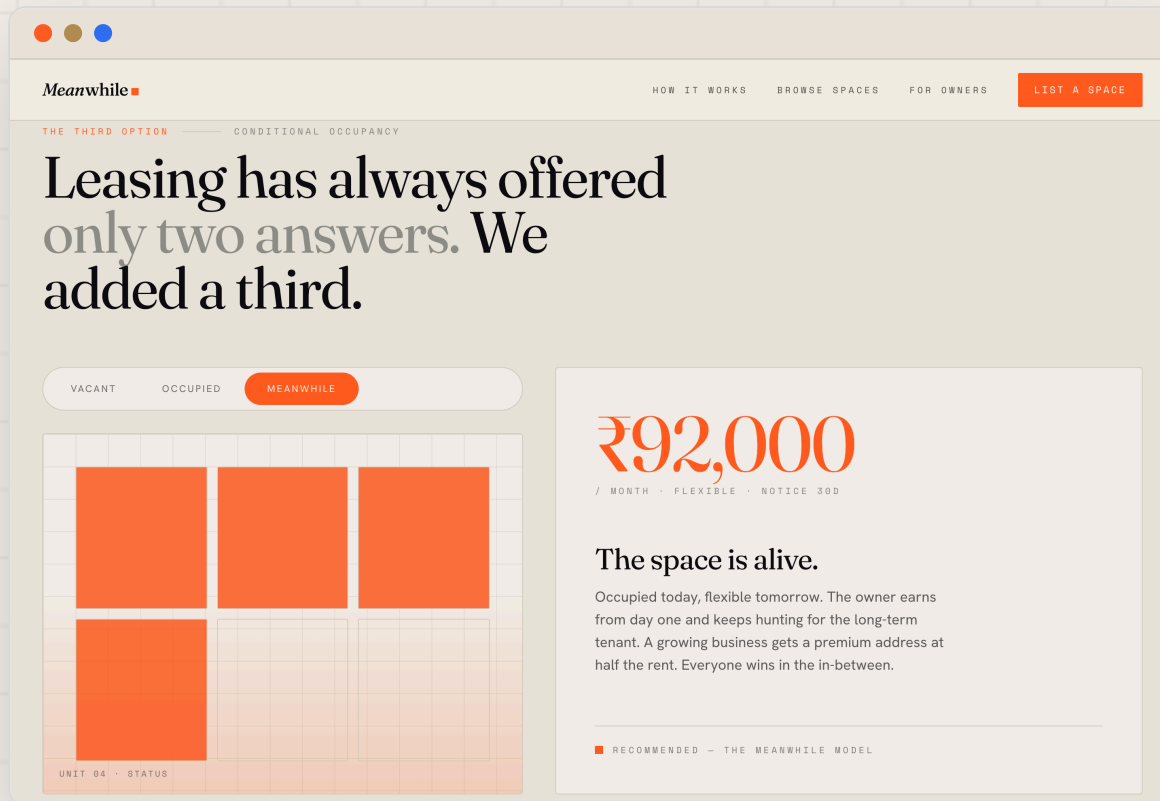

The whole argument, in one scroll.

The landing draws its own floor-plan — walls drawing themselves, rooms lighting in sequence — as the kinetic headline rises from behind masks. Every scroll is a beat: the cost of vacancy, the third option, how it works, the numbers.

- Living floor-plan hero (walls draw, rooms light)
- Live vacancy odometer — sq ft empty right now
- Kinetic masked headline
- Manifesto that names the new category

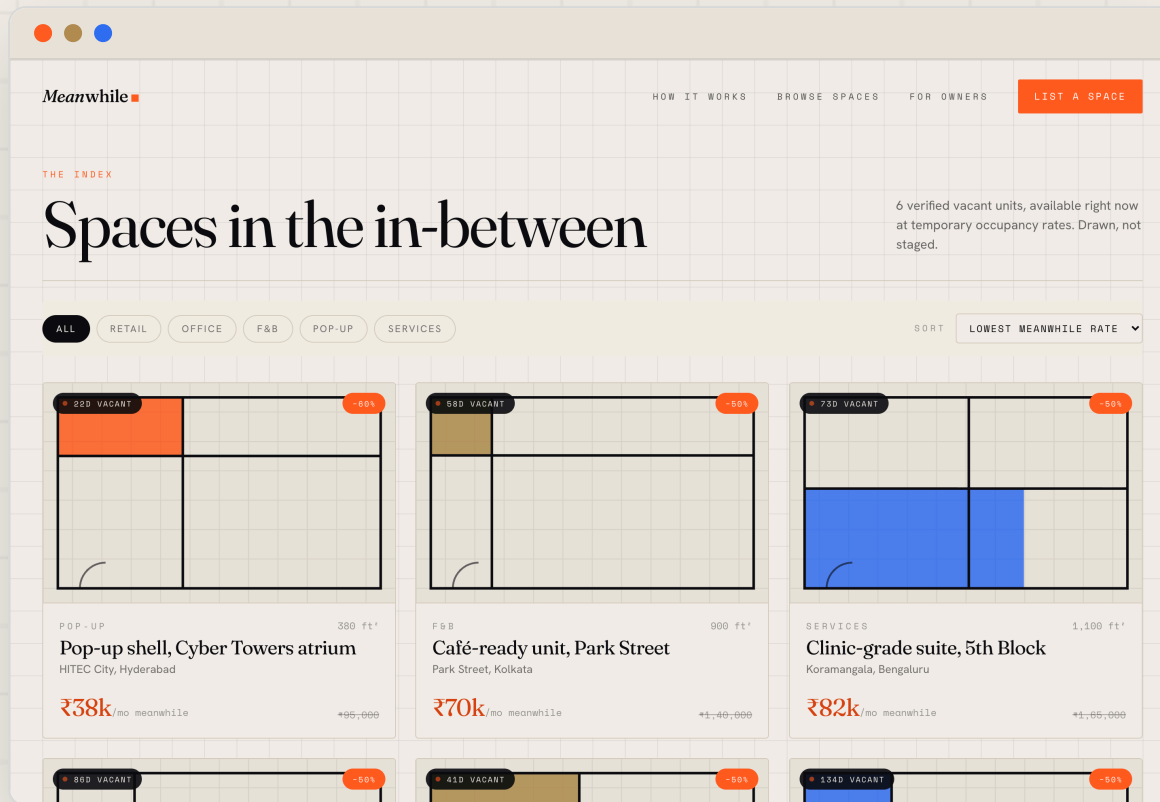

The concept, made playable.

Visitors don't read the pitch — they feel it. A Vacant / Occupied / Meanwhile switch rewrites the revenue, the room and the story as you flip it; a draggable rent-splitter proves both sides come out ahead.

- Three-state occupancy switch
- Windows light up as occupancy rises
- Draggable rent splitter — the ₹60k example
- Owner gain & business saving, both positive

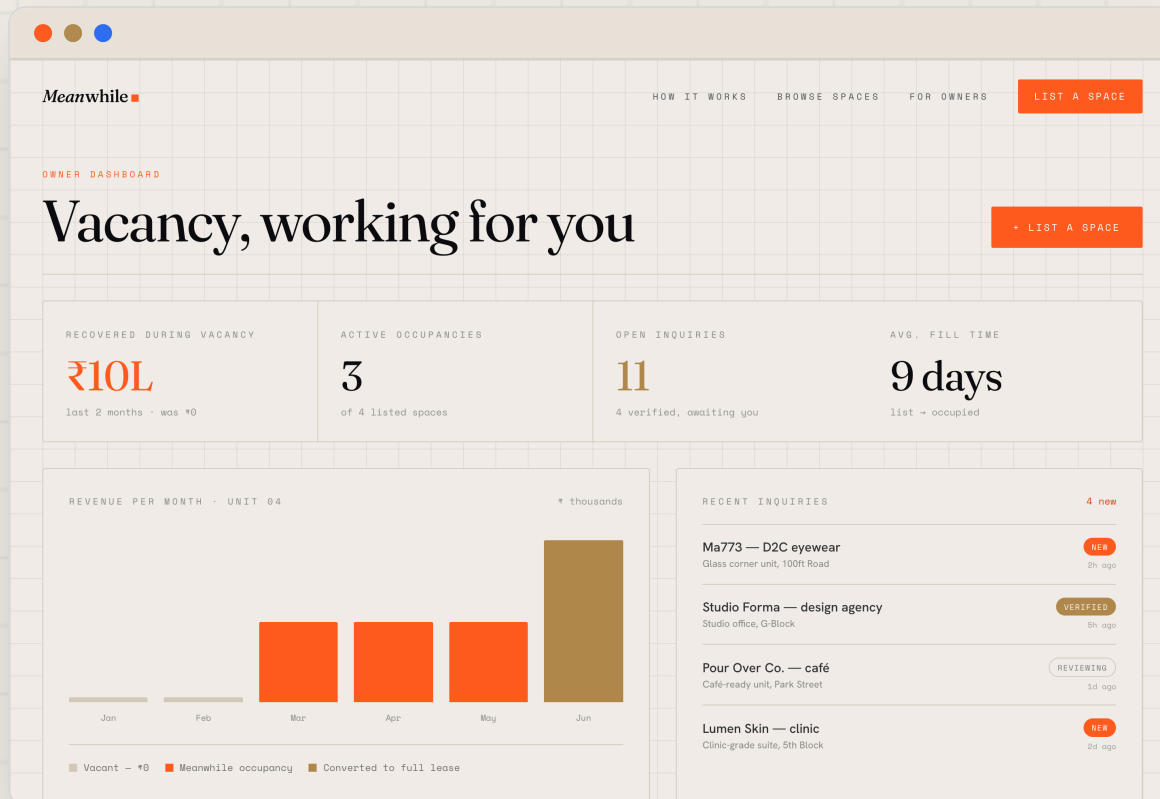

An index of the in-between.

A filterable index of vacant units. Every card carries a uniquely generated floor-plan — drawn from the listing's ID, no two alike — with the meanwhile rate, the discount, and how long the unit has been dark.

- Filterable, sortable grid
- Generated floor-plan thumbnails — code, not photos
- Live "days vacant" badges
- Meanwhile rate vs. full rent at a glance

Vacancy, working for the owner.

The owner's dashboard turns the story into numbers: revenue recovered during vacancy, a chart that runs empty → meanwhile → converted, a verified inquiries feed, and a per-space status table.

— Revenue-recovered chart (empty → meanwhile → full)

— Verified inquiries feed

— Per-space status table

— Listing detail — apply flow, spec sheet, pricing

The details are the design.

01

Floor-plan motion

SVG walls draw via stroke-dash; rooms light in sequence; a gentle parallax drift on scroll — and no paid plugins.

02

Horizontal pin

How-it-works pins and scrolls sideways on desktop via GSAP ScrollTrigger — and stacks cleanly into a vertical flow on mobile.

03

Generated plans

Every listing thumbnail is hashed from its ID into a unique floor-plan, so the whole site ships with zero photo assets.

04

Motion & reach

Lenis smooth scroll, a custom cursor, nav contrast-flip — all honouring reduced-motion and consistent on every screen size.
