

Tideline 

Off the boat. *Onto your table.*

A design-showcase concept — the marketplace for the day's catch. Book a seat on a working boat, or claim a share of the landing, direct from the skipper at the dock price.

A marketplace for the catch, before it leaves the dock.

By the time most fish reaches a plate it has passed five hands and three days. Tideline collapses that distance to a single line — skipper to you — and offers two ways to take it.

OPTION ONE

Take a seat aboard

Go out with the crew on a working boat. Watch the gear go down, haul it back, and come home with the fish you saw land.

OPTION TWO

Claim a share of the landing

Reserve a share before the boat sails. It's weighed, bagged and waiting under your name at the dock — at the price the agent would have paid.

Five hands stand between the net and your plate.

Every one of them takes a margin and a day. The fish gets older, the price triples — and the skipper who caught it sees the smallest cut of all.

The concept, told in one scroll.

The home page opens with a tide curve that draws itself across the shelf while live sea-state readouts settle in. The narrative carries through the five-hand problem, an interactive price splitter, and how it works.

- Kinetic masked headline
- Self-drawing hero tide curve
- Live sea-state: swell, tide, moon
- Dark/light bands that flip the nav

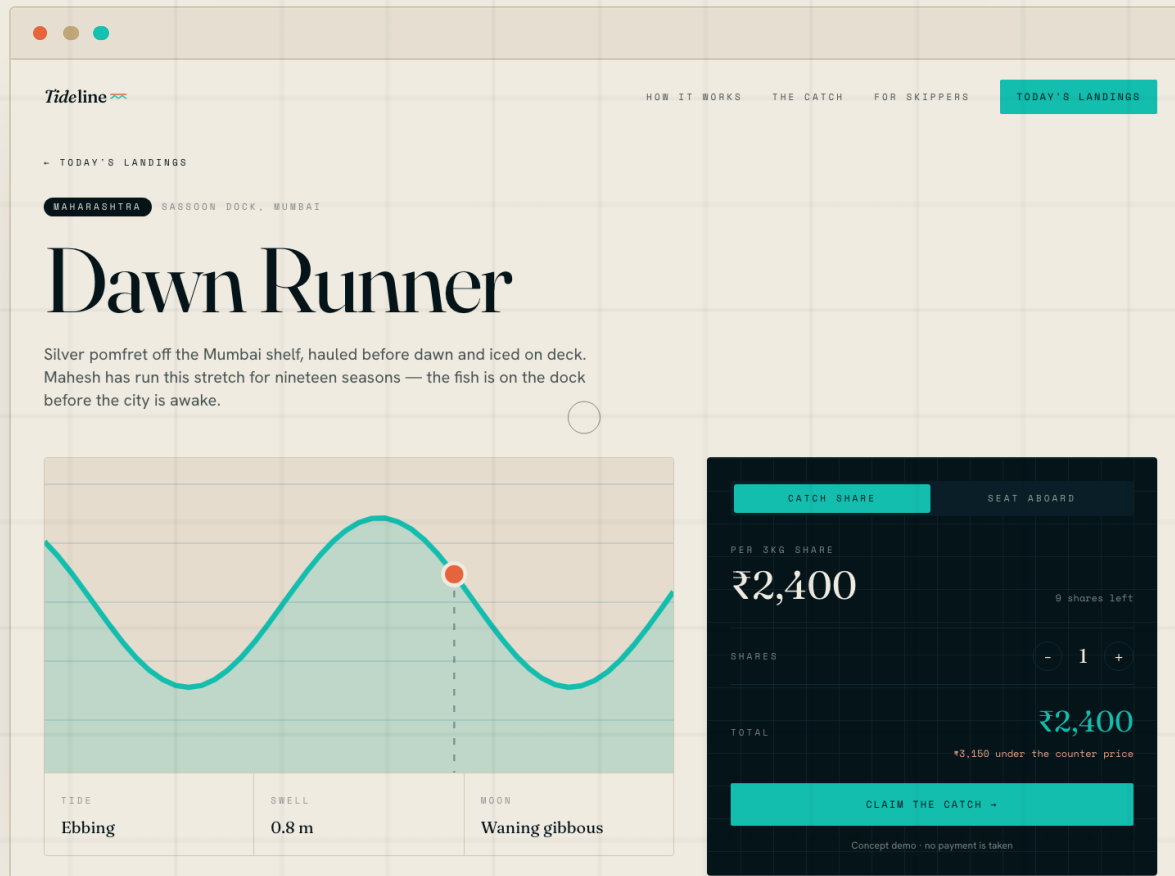

Today's landings.

Every boat sailing within the day, each rendered as its own region-coloured tide chart. Filter by seats aboard or catch shares; each card carries the species, the vessel, and the dock price.

- Generative per-boat tide charts
- Region-coded colour system
- Seat / share at a glance
- Hover lifts the card, scales the chart

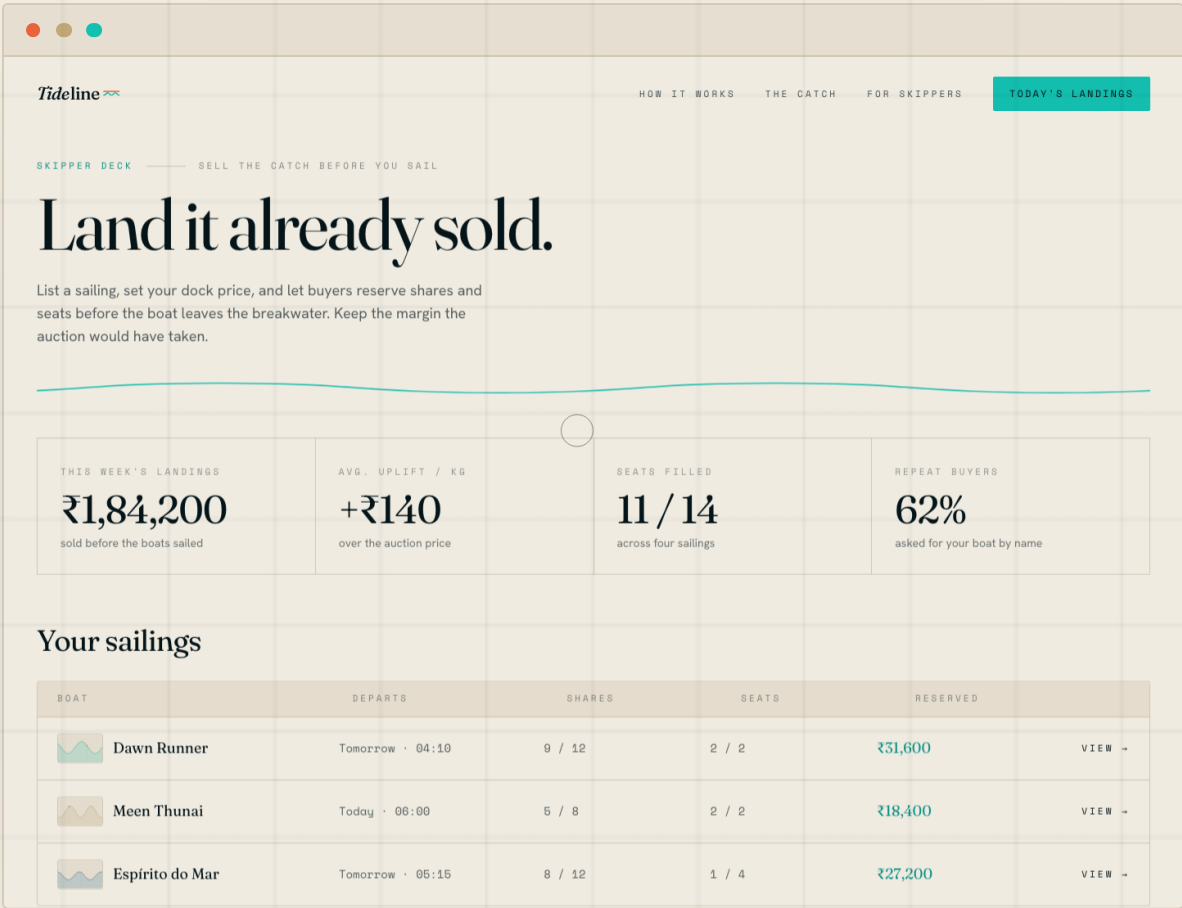

A boat, and a way aboard.

The detail page pairs the boat's tide chart and sea state with a seat-or-share booking panel — a live quantity stepper that shows exactly how far under the counter price each share lands.

- Seat / share toggle
- Live total + savings vs counter
- Full vessel & skipper spec
- Sticky booking panel

Sell it before you sail.

The skipper deck turns the model around: list a sailing, set the dock price, and let buyers reserve shares and seats before the boat leaves the breakwater — landing the catch already sold.

- Pre-sold landings dashboard
- Per-sailing reservations
- Mini tide-chart thumbnails
- Keep the margin the auction took

The details are the design.

01

Drawing tide line

The hero curve renders via stroke-dashoffset — no plugin, just the made. easing.

02

Price splitter

Drag the catch weight; the dock-to-plate spread splits live across you and the skipper.

03

Page transitions

Routes fade up on a keyed remount; smooth-scrolled by Lenis throughout.

04

Reduced-motion

Every animation no-ops gracefully; the cursor and intro stand down.
